Professional Experience

I'm a passionate and motivated Junior Full Stack Software Developer with a strong foundation in React and JavaScript. I have been concentrating on building, improving and maintaining personal full stack applications. So far I have been able to succeed in building and debugging a number of projects that I have been working on. I am eager to contribute to dynamic projects and continue improving my technical skills. I am an active team player, ready to work towards the overall improvement of any project.

Projects:

- **Ecommerce website**

  I created an ecommerce website where buyers are able to browse products, search for products, add and remove products from a cart.

  Live link: https://everybuy.vercel.app/

  GitHub Link : https://github.com/SandraBosibori/everybuy

- **Workforce job search**

  I created a single page react application where users are able to search for certain jobs

  Live link: https://workforce-chi.vercel.app/

  GitHub Link : https://github.com/SandraBosibori/workforce

- **Assign errands application**

  I am in the process of creating a react-based application that will be used for getting people (assignees) to run errands for users.

  Users will be able to register and sign in to their accounts, chat with assignees, keep a record of assignees worked with and keep a personal to do list.

  It will also be possible for assignees to add and delete their profiles.
